## Evening Brief

Date: Thursday September 17<sup>th</sup>, 2020

### Weather Summary

**\*\*\* High Risk for Gusty Wind/Low Humidity for much of Nevada/Idaho/Western Utah and Western Wyoming Friday...Lingering Saturday in Srn UT/AZ Strip \*\*\***

Low pressure moves into the Pac NW on Friday and pushes a cold front into the Great Basin. Stronger winds are expected Friday along with the first day of cooler temperatures, higher RH and some showers in northern Nevada and far southern Idaho. The strongest winds with gusts above 40-45 mph and low humidity will push eastward into eastern Nevada and eastern Utah, as well as Eastern Idaho and Western Wyoming. These winds will occur with areas of low humidity, over near record dry fuels. Winds will also be stronger along the Sierra Front into western Nevada, but RH will likely increase a little to 15-20%.

Further north and west, this low will bring a cold front, with some showers, and much cooler temperatures and higher humidities from the Central Mountains of Nevada up into the Ruby Mountains and up into western Idaho by late Friday into Saturday. Some of these showers Saturday could push across northern Utah as well.

Gusty southwest winds up to 30 mph with low humidity continue Saturday across southern Utah and the AZ Strip.

High Pressure builds back in late in the weekend into much of next week, with a return of warmer and drier conditions. But some moisture from Arizona is expected to move into Utah, bringing clouds, and isolated showers and thunderstorms to the higher terrain by Mon/Tue next week.

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 4	Light Initial Attack Activity
National	PL 5	New Fires and Acres: 9 fires for 46.8 acres. 15,529 acres Large Fire Growth

---

### Fuels/Fire Potential

**\*\*\*A Fuel and Fire Behavior Advisory is in Effect for Western Idaho, Eastern Nevada, Most of Utah and the Western Arizona Strip \*\*\***

Fuels across most of the Great Basin have steadily dried over the past week of warmer/drier than normal conditions. Across Nevada, and western areas of Idaho/Utah, fuels are drier than late summer normals, and near record dry levels in some spots. Wind driven fire spread are likely in areas under "High Risk" for wind the next two days (refer to 7-Day Matrix).

Across eastern areas of Idaho/Utah, as well as Western Wyoming, fuels are in a temporary state of flux. Precipitation from almost a week ago moderated fire danger, but even in these eastern areas,

fuels have steadily dried with the ongoing warmer weather. By the Friday wind event, it is anticipated that many eastern areas will be back again at critically dry fuel levels. However, areas of wetting rains across Idaho into Wyoming and parts of northern Nevada and far northern Utah by Saturday, could significantly moisten fuels for several days.

Live Fuel moisture in low elevation brush remains critically dry, between 60-100% in most areas, which correlates with extreme fire behavior.

## Resources:

### Aviation within the Great Basin

- o 1 VLAT, 8 LATs, 0 CL-415
- o 23 SEATs, 1 FB, 14 AA, 2 ASM, 0 LP
- o 9 Type 1 Helicopters / 9 Comm.
- o 9 Type 2 Helicopters / 9 Comm.
- o 22 Type 3 Helicopters / 20 Comm.

### Crews Committed within the Great Basin

- o 11 IHCs / 0 Available
- o 10 Type 2IA / 0 Available

## Current Incident Details

Today's Activity (from WFDSS):

Incident Name	Unique Fire Identifier	Size	Status	Latitude	Longitude	Pt. Of Origin Sage Grouse Habitat
